Using Medline

A comprehensive source of full text medical journals provided by the National Library of Medicine

1,370 Journals

Years: 1946-Present

Content:

- Reports of original research
- Original clinical observations accompanied by analysis and discussion
- Analysis of philosophical, ethical, or social aspects of the health professions or biomedical sciences
- Critical reviews
- Statistical compilations
- Descriptions of evaluation of methods or procedures
- Case reports with discussions

From [http://library.alliant.edu](http://library.alliant.edu) select “Databases” under the Research tab
From the alphabetic menu, select Medline
(Medline is also available for mobile devices as part of the EBSCO app)
**Search Tip:** Medline uses the MeSH subject headings. Subject headings are assigned based on article content and help you retrieve better results. To access MeSH terms for a better search, hover mouse over “More” and click “Indexes”
1) Select “Mesh heading (Major) from the Menu

2) Enter your general search term and click “Browse”

3) A list of MeSH terms will be returned. Select the term that best fits your search.

4) Click “Add”
Your search terms are now in line with MeSH. Add more or
simply click “Search” to retrieve results.

View your search results or use even more limiters to refine the items returned
